

The Seasons

We have four seasons in a year. These are autumn, winter, spring and summer.

Spring

The weather gets warmer.

Young chicks and lambs are born.

Green leaves and flowers start to grow.

Summer

There is more sunshine.

There are lots of green leaves on trees.

Flowers are in bloom.

Autumn

The weather starts to get cooler.

Leaves change colour and fall from the trees.

Acorns and conkers fall to the floor.

Winter

It gets cold and sometimes snows.

People wear hats and gloves.

Some trees have no leaves left.

The Seasons Comprehension

1. How many seasons are there in one year? Circle one.

four

five

six

2. In which season do leaves start to grow on the trees? Circle one.

autumn

spring

winter

3. What type of weather is there more of in summer? Circle one.

snow

frost

sunshine

4. Circle the correct word to complete this sentence:

Leaves change colour and fall from the _____.

sky

house

trees

5. Tick the clothing you might need to wear during the winter when it is cold.

swimming costume	<input type="checkbox"/>
hats and gloves	<input type="checkbox"/>
T-shirt and shorts	<input type="checkbox"/>

The Seasons

Every year has four seasons. Each season lasts for around three months. The seasons are called autumn, winter, spring and summer.

Spring

After winter, the season turns to spring. In spring, the weather gets warmer. Young chicks and lambs are born. Green leaves start to grow on trees and plants begin to flower.

Summer

In summer, there is more sunshine. We have more hours of daylight. There are lots of green leaves on the trees and flowers are in full bloom. We see lots of bees and butterflies buzzing around the plants.

Autumn

In autumn, the weather becomes cooler and it gets dark earlier at night. Leaves start to turn red, orange and brown and fall from the trees. You might even enjoy collecting conkers and acorns during autumn!

Winter

In winter, we have colder weather, such as frost and snow. You need to wear warm clothes during winter, like hats and gloves. There are fewer hours of daylight so the days get shorter. Most trees have lost all of their leaves. Some trees have no leaves left.

The Seasons Comprehension

1. How many months does each season last for? Circle one.

four

five

three

2. Which season comes after winter? Circle one.

autumn

spring

summer

3. In summer, do we have more hours of daylight or fewer hours of daylight?

4. What happens to the leaves in autumn?

Leaves start to turn _____

5. Can you match up the boxes to complete these sentences?

In winter, we have colder weather, such as

it gets dark earlier at night.

In autumn, the weather becomes cooler and

frost and snow.

In summer, there are lots of green leaves on the trees and

flowers are in full bloom.

The Seasons

Each year can be divided into four seasons: autumn, winter, spring and summer. Each season lasts for around three months. The seasons have an impact on what happens on Earth, such as our weather and plant life.

Spring

Spring is the season that follows winter. In spring, the weather gets warmer. Animals start to give birth to their young, such as chicks and lambs.

Green leaves start to appear on trees and plants begin to flower. The increased sunlight and rainy showers give the plants the warmth and water they need to grow.

Summer

In summer, there is usually more sunshine and we have the warmest weather of the year. Many people take their holidays at this time of year. We have more hours of daylight as the sun rises earlier and sets later.

During summer, the trees fill out with green leaves and flowers are in full bloom. We see lots of bees and butterflies buzzing around the bright flowers.

Autumn

In autumn, the weather becomes cooler and the days get shorter as it gets dark earlier at night.

Leaves on deciduous trees (trees that lose their leaves in autumn and winter) start to change colour. They turn red, orange and brown and fall from the trees. Conkers and acorns fall to the floor. Lots of animals eat or collect them as they prepare for hibernation (a deep sleep that some animals enter to save energy and survive the winter).

The Seasons

Winter

In winter, the colder weather brings frost and sometimes snow. You need to wrap up warm in winter by wearing jumpers, hats, scarves and gloves. We experience the shortest days and longest nights of the year as we have even fewer daylight hours.

Deciduous trees do not have any leaves at all in winter. Lots of animals spend the winter hibernating, not reappearing until spring.

The Seasons Comprehension

1. Circle two things that the seasons have an impact on.

the weather

the Moon

plant life

2. How many seasons is the year divided into?

nine

four

three

3. What happens to a deciduous tree? Tick one.

It keeps its leaves all year round.	
It loses its leaves in autumn and winter.	
It has no leaves all year round.	

4. In which season do we have the shortest days?

5. Can you write two things that happen in spring?

Use the text to help you.

1. _____

2. _____

6. Which season is your favourite?

Can you explain why?
