

# Rainforest

The rainforest has many different plants.

Some plants are very old.

The trees grow very tall.

They fight to reach the sunlight.

The trees need very big roots

to stop them falling over.

Some of the trees are very strange.

Vines grow around the tree trunks to reach sunlight.

Here is a seed pod from a very old tree.

The seeds of another tree grow on its trunk.

These are roots that grow above the ground.

Some plants are very rare.

The Fan Palms are only found in a few places.

There are also lots of flowers on  
some of the plants.

Fungus is very important in the rainforest.

Animals are also important.

Some animals are very hard to see.

Here is a wallaby hiding in the rainforest.

The rainforests are vast and  
come down to the sea.

Mangrove trees grow in the water.

Mangrove trees have many roots

to stay upright in the water.

Crocodiles live in the water at  
the edge of the rainforest.

Can you see the crocodile swimming?
