

# Habitats

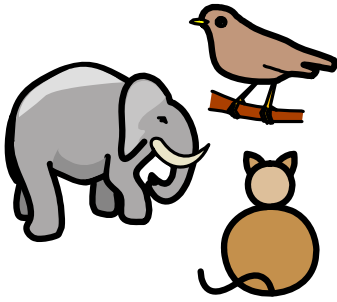

Every

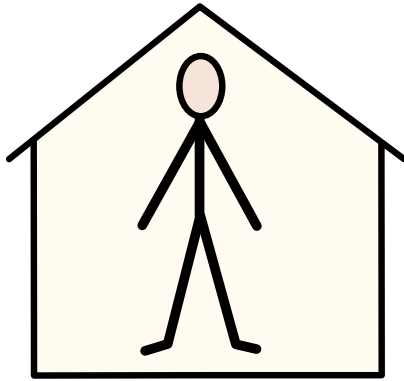

plant

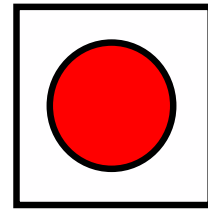

or

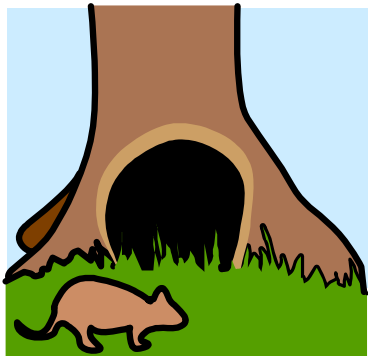

animal

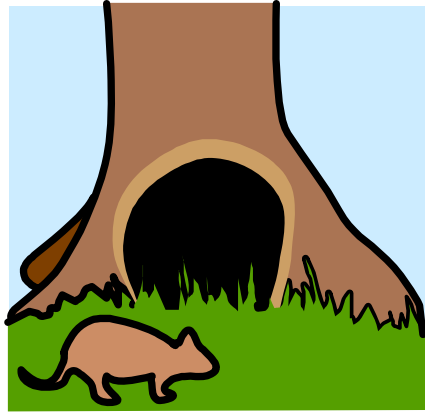

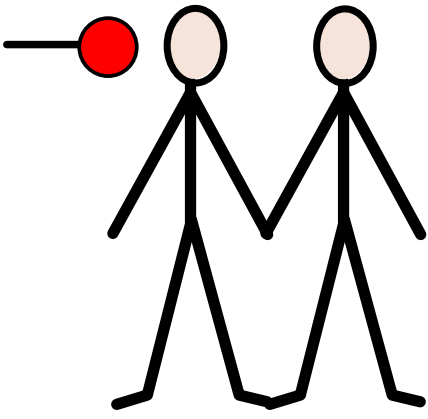

lives

in

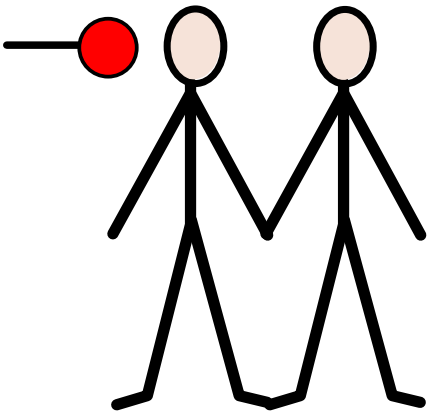

a habitat.

Their

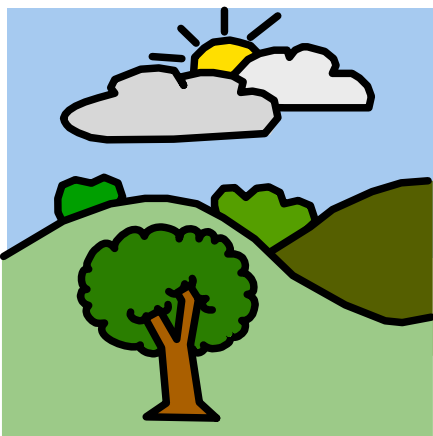

habitat

is

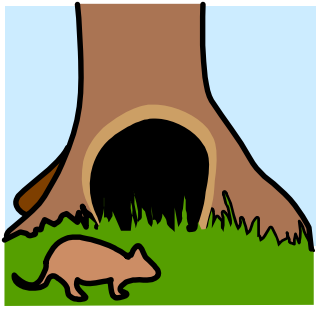

their

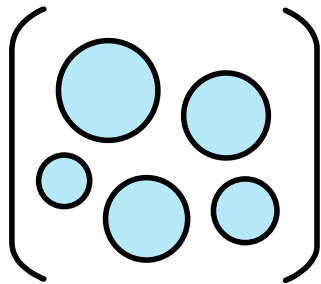

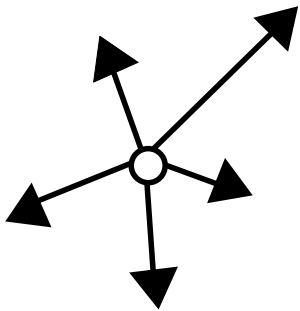

local

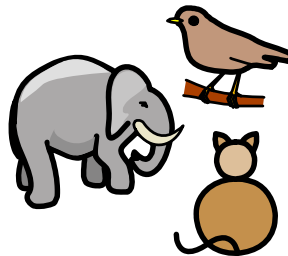

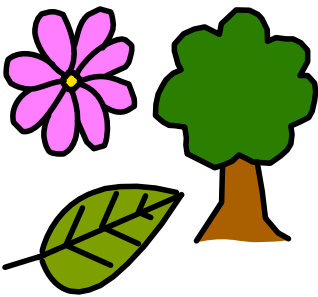

environment.

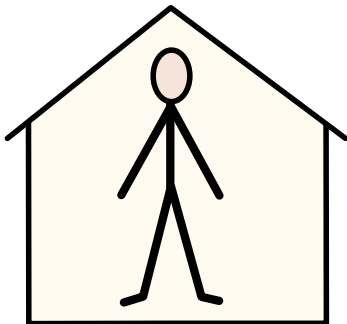

A habitat is a place

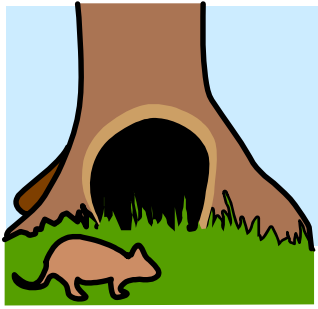

where a collection of

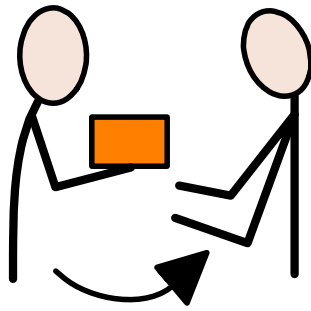

plants and animals

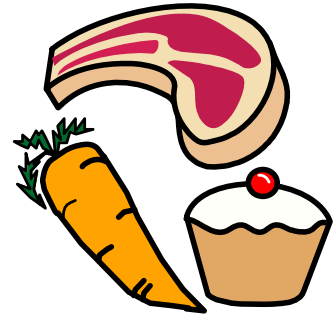

live.

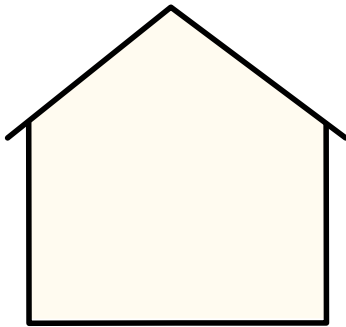

A habitat

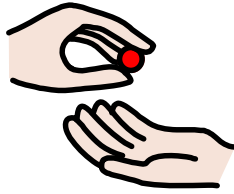

provides

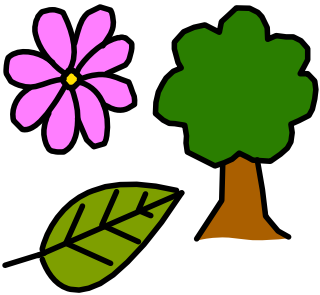

food

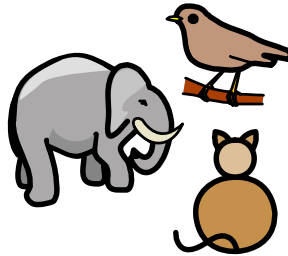

and shelter

for the

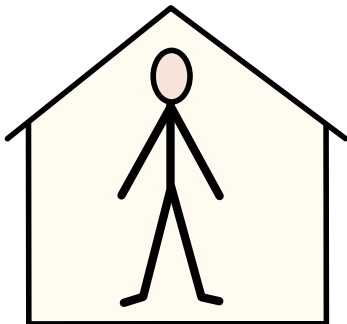

plants

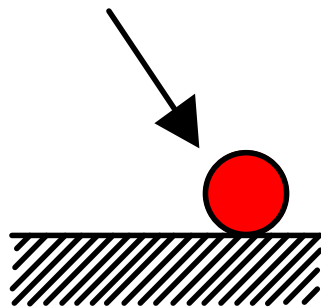

and

animals

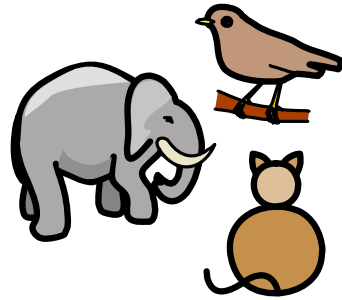

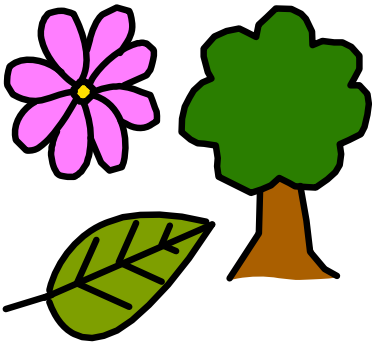

that

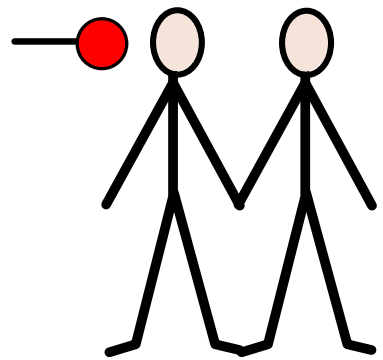

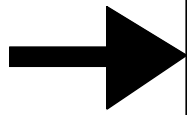

live

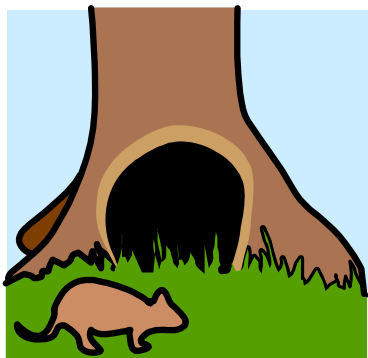

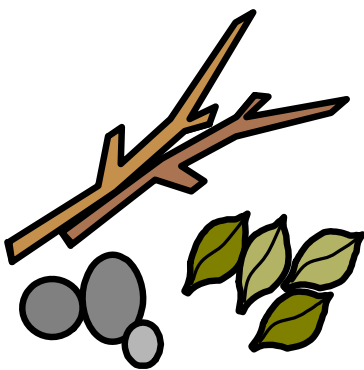

there.

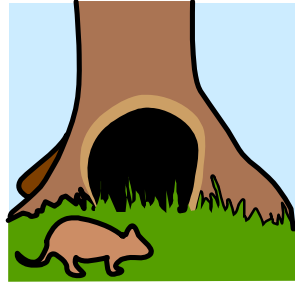

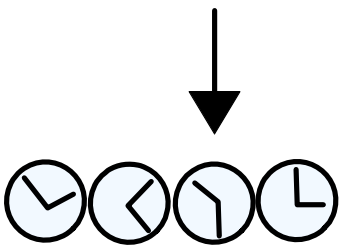

Plants and animals

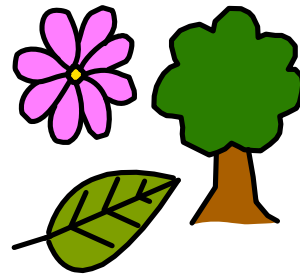

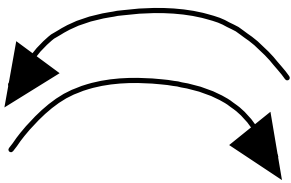

are suited to their

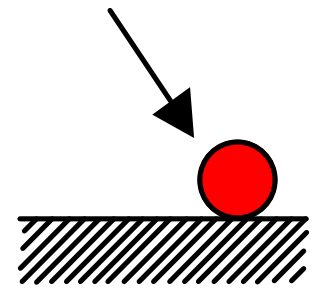

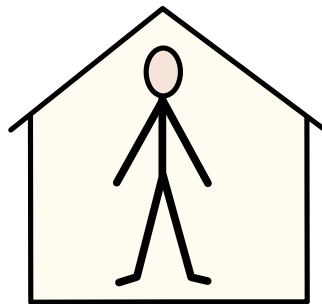

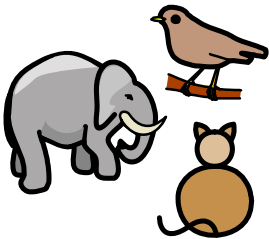

natural habitat.

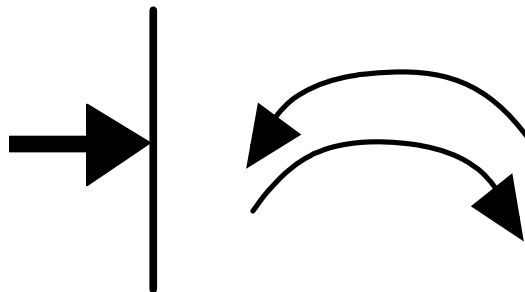

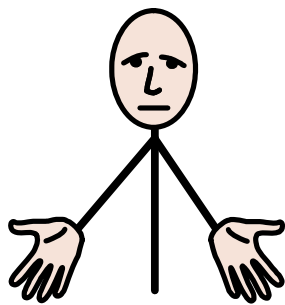

Sometimes a habitat may

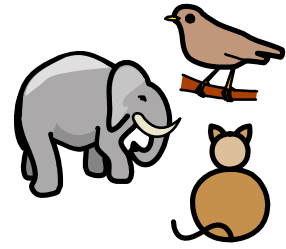

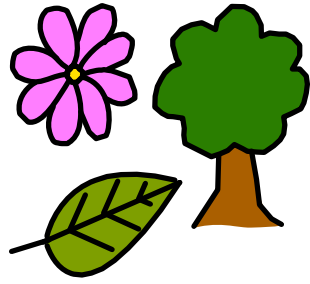

change, and the plants and

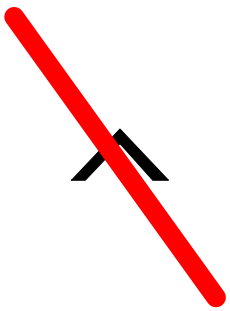

animals that live there

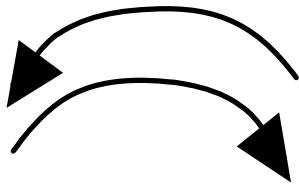

may need to adapt.

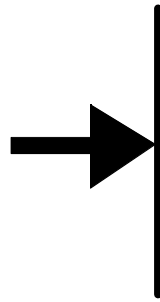

If the plants and animals

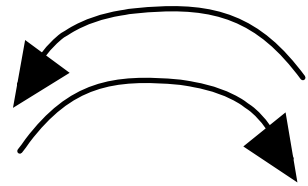

cannot

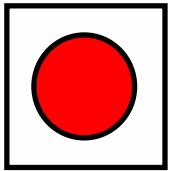

adapt

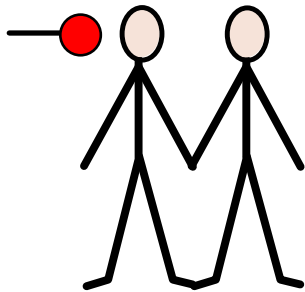

to

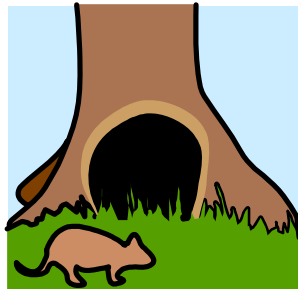

changes

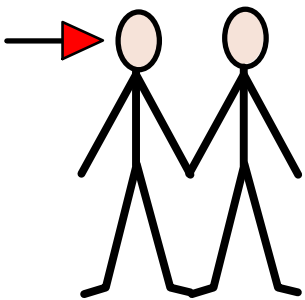

in

their

habitat

they

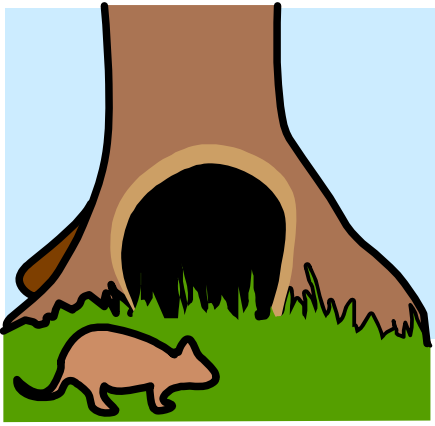

not

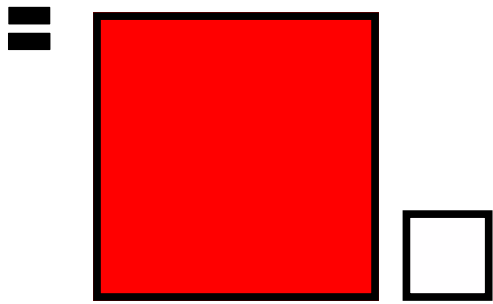

survive.

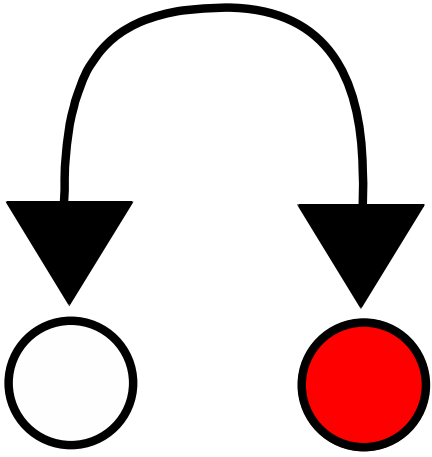

Habitats can be

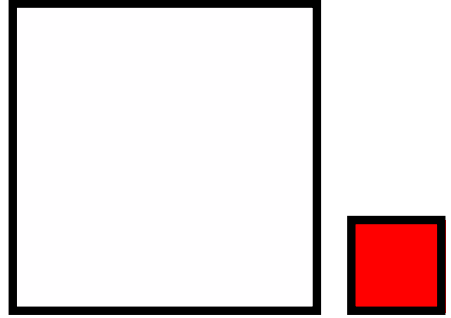

as big as a jungle...

=

Or

as

small

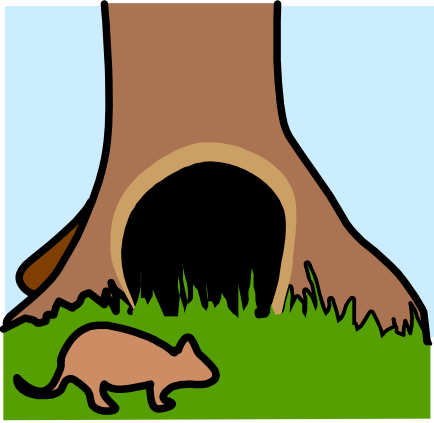

=

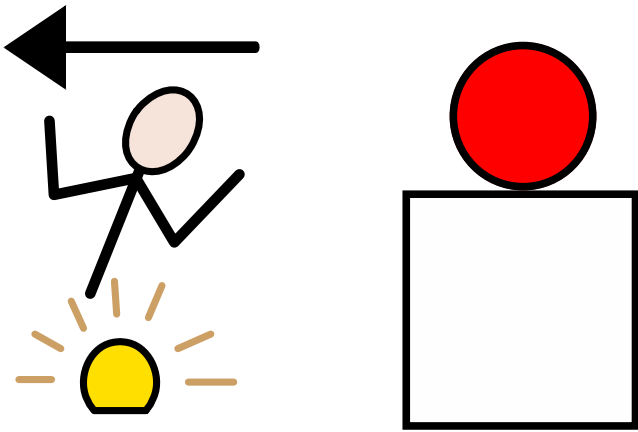

as

a

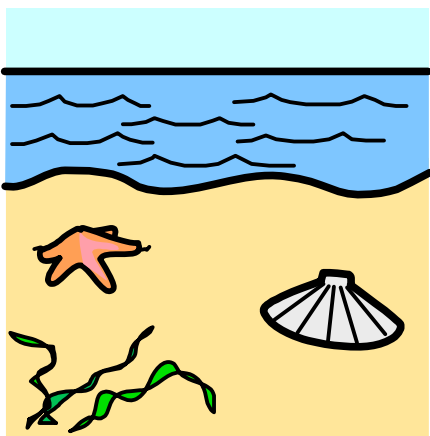

leaf.

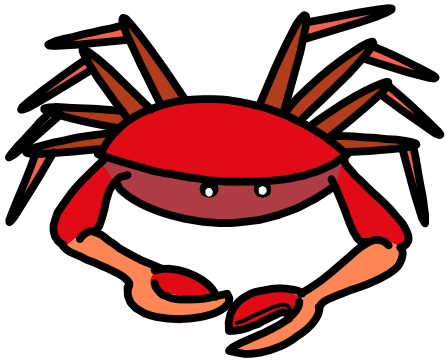

Habitats can be

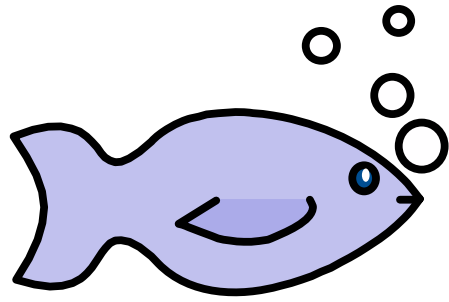

found on the

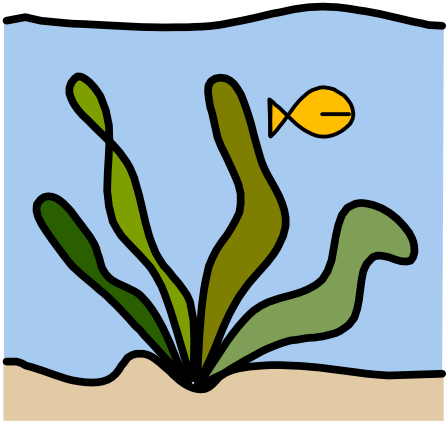

seashore...

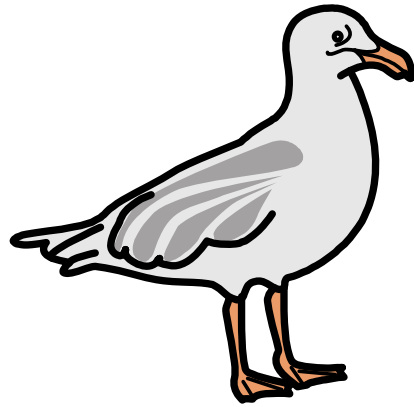

crabs

fish

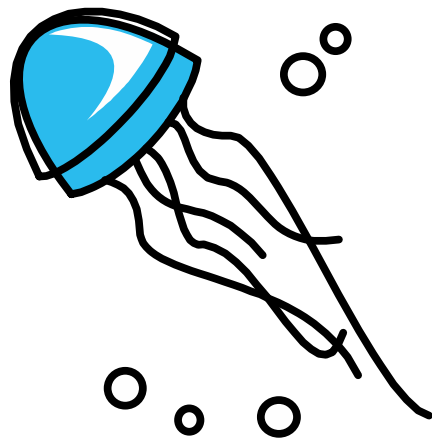

seaweed

seagulls

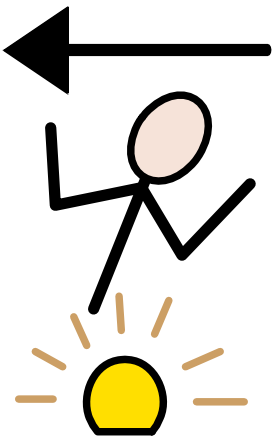

starfish

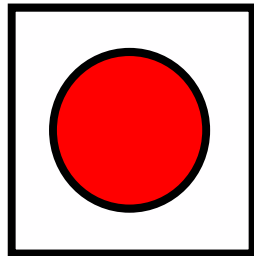

jellyfish

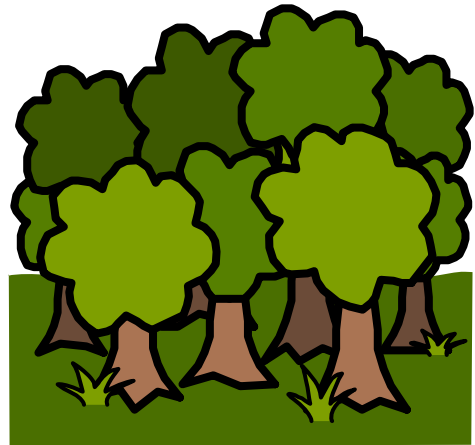

Habitats can be

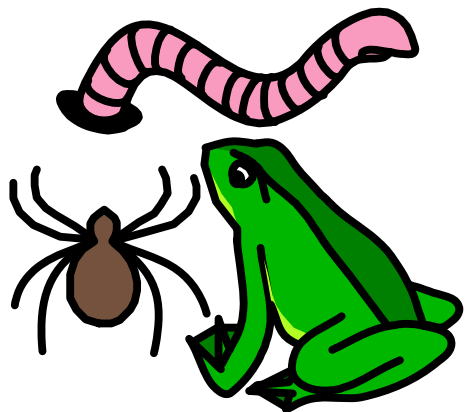

found

in

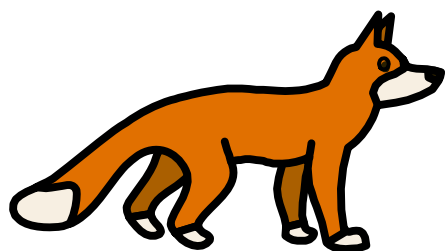

woodland...

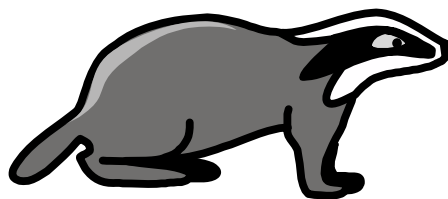

minibeasts

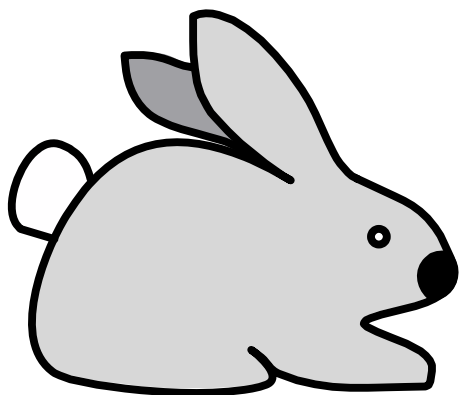

birds

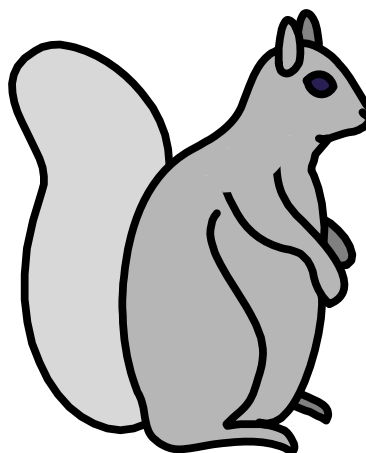

foxes

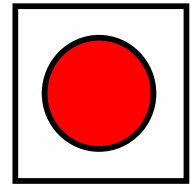

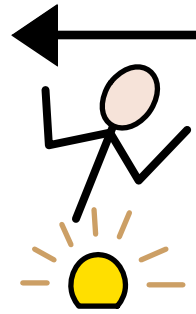

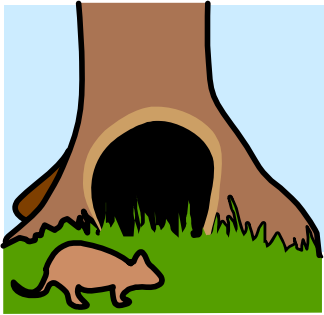

badgers

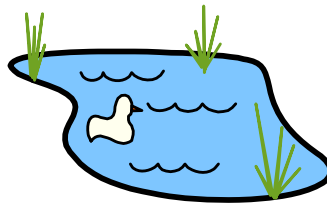

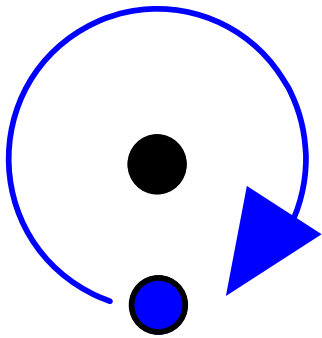

rabbits

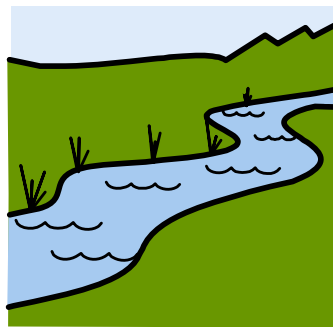

squirrels

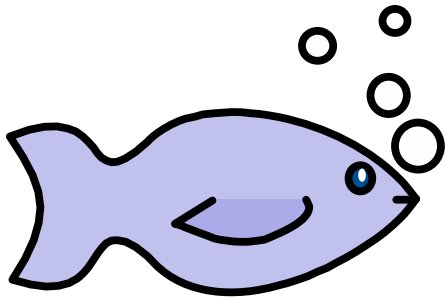

Habitats can be found in

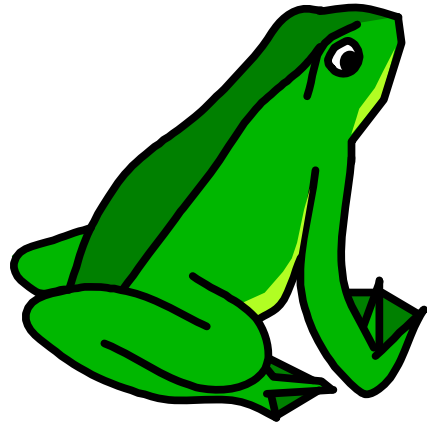

and around ponds,

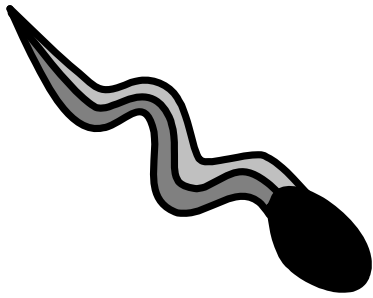

lakes and rivers...

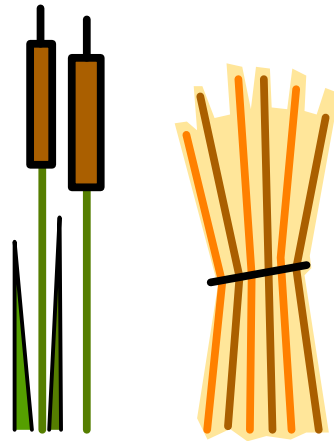

fish

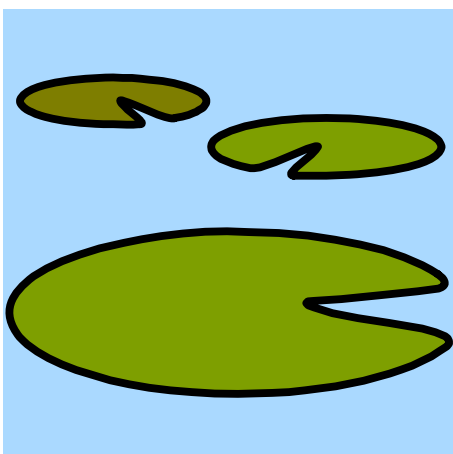

frogs

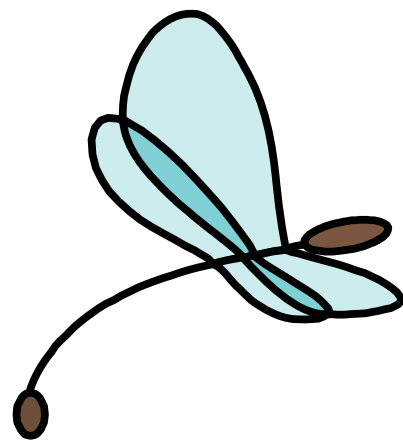

tadpoles

reeds

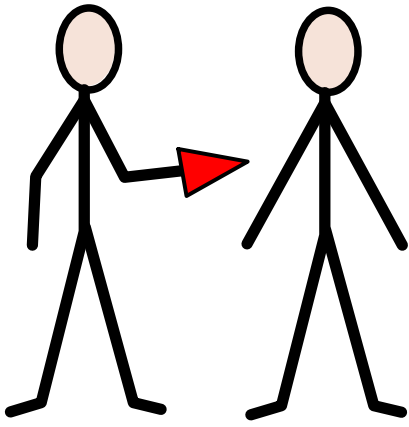

lily pads

dragonfly

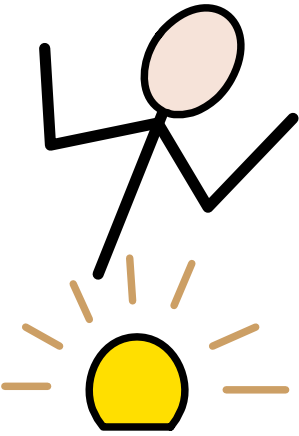

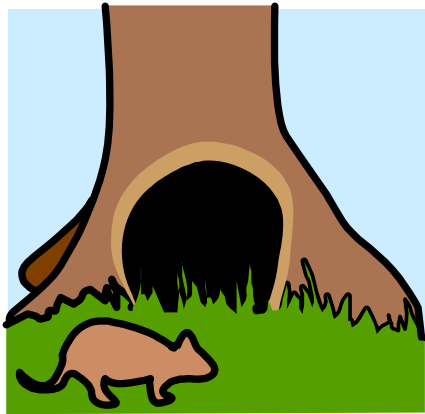

You

will

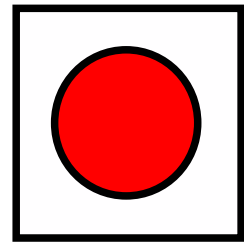

even

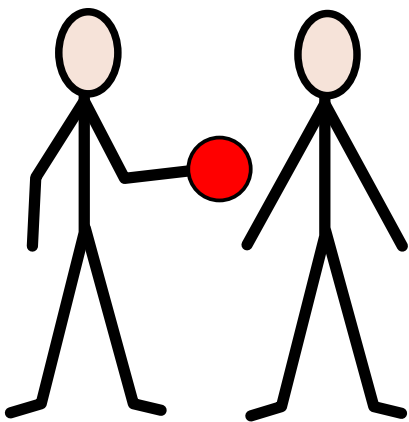

find

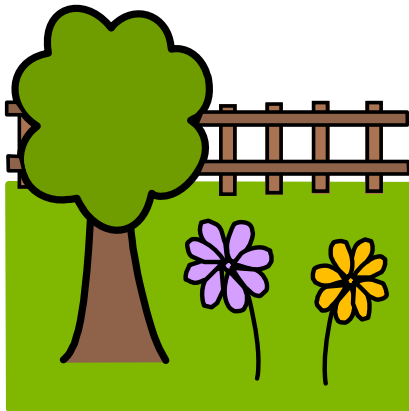

habitats

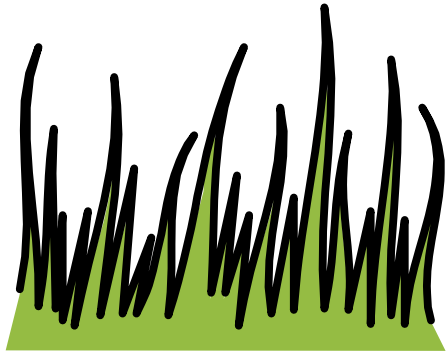

in

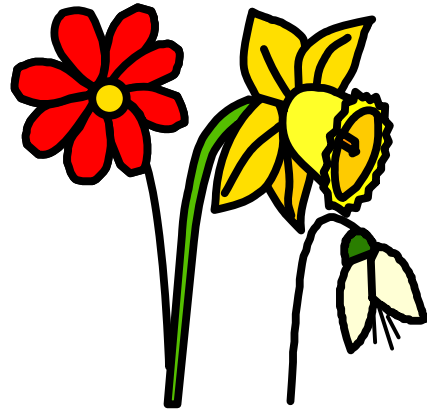

your

garden!

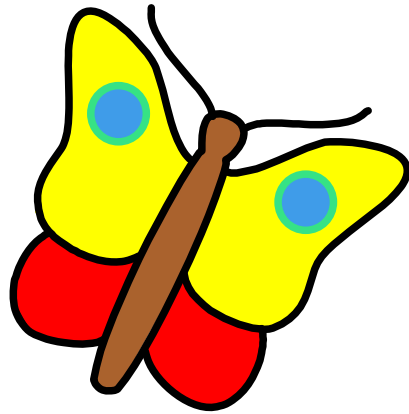

grass

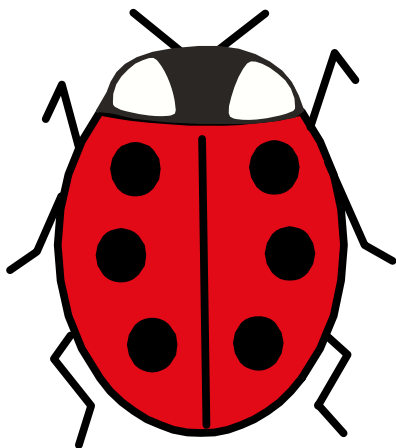

flowers

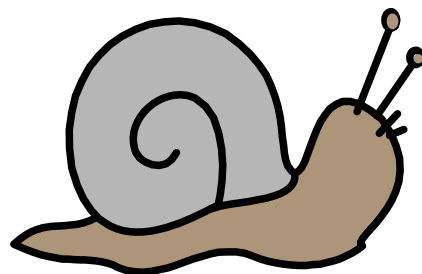

trees

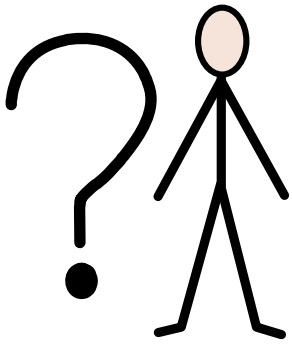

butterflies

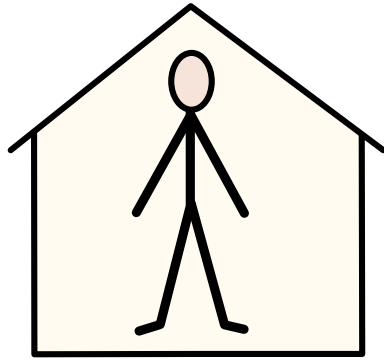

ladybirds

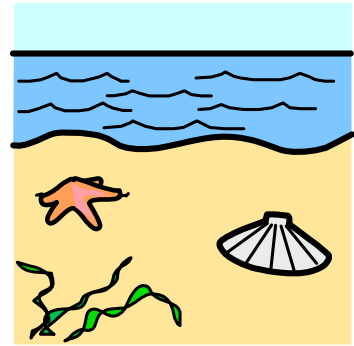

snails

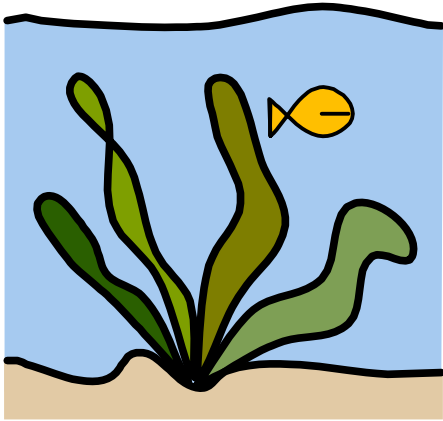

Who

lives

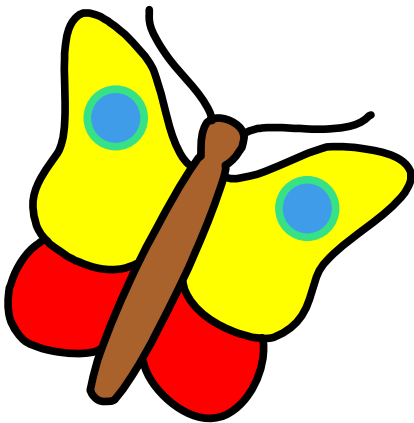

here?

seaweed

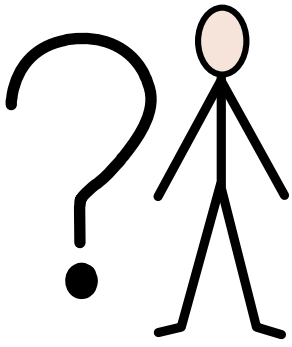

squirrel
